

BENEFITS

- Australian Made & Owned
- Sustainable & Responsible Product
- Mineral Composite Post
- 100% Recycled Plastic
- Non-Toxic
- Fully Insulated
- Long-Lasting
- Powerful Bounce Back Strength
- Burning Point 350°C
- Will Not Rot, Rust or Corrode
- Lightweight for Handling & Transport

**Unaffected
by saltwater
corrosion**

TECHNICAL SPECIFICATIONS

- Australian Made
- Polymer Mineral Composite
- Black in Colour
- UV-Stabilised
- Square 38mm (w) x 38mm (d) with Driving Point
- 1650mm (5'6") long 2.3kg
- 1800mm (6') long 2.5kg
- Pre-Drilled Holes: 14 x 7mm
- Life Expectancy of 50+ Years
- Manufactured using recycled post-consumer soft plastics, in accordance with AS/NZS ISO 14021

ENDURAPOST

EnduraPost is an Australian made mineral composite recycled post, designed as a direct replacement for the old timber or steel picket.

EnduraPost solves two major problems:

- 1. Making fence posts last a lifetime in the harsh Australian climate.**
- 2. Repurposing the mountains of plastic waste in Australia.**

EnduraPost is made from 100% recycled plastic and a mineral blend for increased strength and longevity. It is incredibly tough, durable, drivable and fully insulated, making it ideal for almost any kind of rural fence.

DURABILITY

EnduraPost's unique mineral composite blend is the secret to why it is so tough. It is particularly suited to harsh environments where water-logged, acidic, alkaline or saline soils cause traditional posts to rot, rust and corrode. EnduraPost will not rot, rust or corrode, nor be eaten by termites and is UV-stabilised to last in the harsh Australian climate.

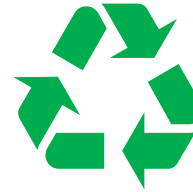

LONG LASTING, WILL NOT ROT, RUST OR CORRODE

SUSTAINABLE

Australia has a huge environmental issue when it comes to plastic waste with literally mountains of it going into landfill, being stockpiled or sent overseas to become someone else's problem.

Recycling soft plastic waste into a usable & beneficial product has always been challenging, but EnduraPost is one of the great recycling success stories. Made from 100% recycled plastic waste by Plastic Forests (an award-winning Australian innovator and manufacturer of recycled products), EnduraPost is an environmentally sustainable post, which responsibly addresses the plastic waste problem in Australia's backyard. Even when EnduraPost comes to the end of its long life, it too will be 100% recyclable.

INSTALLATION

EnduraPost can be easily installed using manual or mechanical drivers and can be sawn, drilled and screwed. In hard or rocky ground, simply make a pilot hole with a 38mm x 600mm masonry drill bit to clear rocks or roots before installing. Designed as an inline post (not suitable as a weight-bearing post or strainer), EnduraPost can support all forms of wire, including plain, barbed, hinge-joint and barrier-mesh fencing. It is also great for creating mesh tree-guards around newly planted trees.

FULLY INSULATED

EnduraPost is a fully insulated post meaning fences can be electrified with as many wires as needed without the added expense of installing insulators to posts. Use EnduraPost to quickly build a more cost-effective electric fence.

FIRE

Do you want to know just how tough EnduraPost is?

A timber post can ignite in a fire from around 150°C but EnduraPost will typically need to reach around 350°C before it ignites. It does not burn easily or explode, and is able to withstand ember attack, back-burning and grass fires where fuel loads are controlled. Visit our website for further details.
