

## BENEFITS

- Australian Grown
- Sustainable Product
- Long-Lasting
- 80-year-old Plantation Timber
- Stronger than most “hard woods”
- Termite & Rot free
- Tough & Durable
- Maintenance free & easy to install
- Customizable
- Lightweight for handling & transport

## TECHNICAL SPECIFICATIONS

- Australian Milled
- Plantation timber
- Treatment: H5 (Copper Azole) – Custom treatments available
- Strainers up to 200x125mm profile in 7, 8 & 9 foot long
- Posts 60x85mm or 75x100mm in 6-7 foot long
- Custom sizes available
- Life expectancy of 50+ years

# AA-TUFFwood

# STRENGTH & DURABILITY

# INSTALLATION

EnduraPost AA-TUFFwood posts are grown from sustainable plantations in SE Queensland to outlast any other timber post available.

## EnduraPost AA-TUFFwood provides:

1. Australian timber strainers that are lightweight and tough.
2. H5 treated posts for extra durability

AA stands for Australian Araucaria, an Aussie-grown native that is farmed and select harvested using sustainable practices. Harvested in close-proximity of the timer mill to keep the log miles down, they are tough and durable, making them the perfect option for posts and end-assemblies in any kind of rural fence.

**GROWN LONGER TO LAST LONGER**

Even though Araucaria is considered a soft wood, names can be deceiving as this is a soft wood only by name. It boasts a tight, uniform cell structure, with minimal knots combined with 80 years of growing strength. The age of the trees creating timber that is up to two meters in diameter, meaning they are cut from age-hardened section that do not include the sap wood.

Combining the age and structural strength with a H5 copper azole treatment (same as a power pole) ensures that EnduraPost AA-TUFFwood provides more than adequate protection against very severe decay, fungal growth, termites, borers and moisture rot. Unlike most other timber posts and strainers on the market, they're made to last for generations.

## SUSTAINABLE

Our timber is ethically sourced from sustainably managed & certified plantations, and the mill is close to our timber source, which contributes to reducing the industry's carbon footprint by reducing 'log miles'. Our 'Zero Waste Policy' means that we ensure all our by-products are managed in environmentally sustainable ways, and on-sold as renewable products.

You might not realize that for every tree harvested, four more are planted, increasing the overall forest size for the benefit of generations to come. Being responsible doesn't have to be difficult.

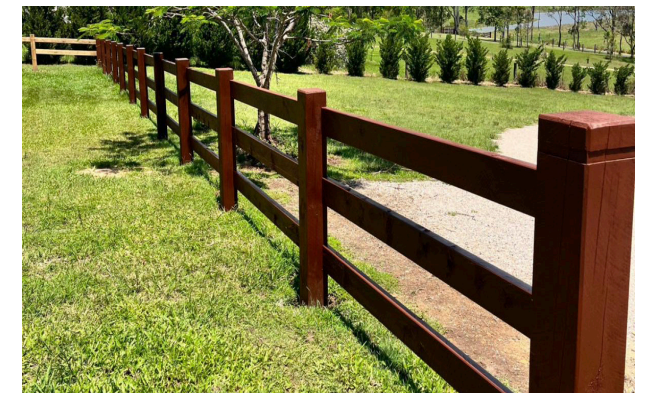

EnduraPost AA-TUFFwood can be driven into most ground with or without a pilot hole. They are light for their size and strength, which makes handling them so much easier than other posts and strainer options available. They can be cut, sawn, and drilled to suit your specific purpose.

## END-ASSEMBLY KITS

EnduraPost can provide end-assembly kits to suit your specific requirements such as angle stay or box-end kits, along with a range of accessories.

## CUSTOMIZABLE

EnduraPost AA-TUFFwood can also cut timber to suit your application. As Araucaria is widely used in structural building as well as making fine grain furniture, why not make an impressive front fence for your house yard, or a very strong set of cattle yards. It can be customized, stained, painted and treated with fire retardant for extra protection.

EnduraPost AA-TUFFwood Strainers and posts are a reliable choice. Light yet strong, durable and sustainably made here in Australia for the long run.
