

BENEFITS

- Extra thick galvanised coating
- Extra long-lasting
- Extremely tough
- Suits hard terrain
- Easy to install
- Drivable and durable
- Real rust protection

TECHNICAL SPECIFICATIONS

- Australian designed and patented
- Hot-dipped galvanised with 300 microns of galvanising
- Pack sizes: 10 per pack/bundle
- Sizes: Profile: 18-32mm
Length: 1800-2400mm (6-8 ft)
- Custom sizes available upon request
- Life expectancy of 50+ years

BULLpost

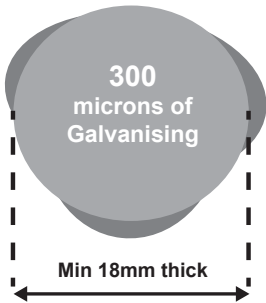

BULLPOST

STRENGTH AND DURABILITY

The EnduraPost BULLpost is pure **grunt!**
No gimmicks, just a super tough, long life,
incredibly easy to use farmers fence post.

EnduraPost BULLpost provides:

- 1. A galvanized steel post that is seriously tough.
- 2. A post made to outlast other steel fence posts.

*If steel is your go-to,
then the BULLpost is the-go for you!*

EnduraPost BULLpost is a solid galvanised steel post that is designed to outlast other steel posts. Our patented design boasting a HUGE 300+ microns of galvanising over solid steel ranging from 18 to 32mm thick, makes this post incredibly strong and durable. Perfect for driving through the toughest ground and a far superior intermediate fencing post than any other steel post on the market today. Strapped in packs of 10 for handling and versatility, they are even suitable as inline strainers for that long run, or to strengthen high pressure zones such as laneways and cool-off pens.

COMPARE BULLpost WITH OTHER STEEL POSTS

When you compare EnduraPost BULLpost to other steel posts such as the steel star pickets, it is easy to see why the BULLpost will outperform them in every situation.

	Steel Star Picket	BULLpost
	★☆☆☆☆	★★★★★★
STEEL THICKNESS	2 - 6 mm	18 - 32 mm
GALVANIZING THICKNESS	80 microns	300 microns
STRENGTH (heavy pressure)	Bends or breaks	Doesn't bend or break

EnduraPost BULLpost is the perfect solution in high pressure zones where steel star pickets either rust, are bent, or even snap off under pressure, leaving a very sharp and dangerous legacy in the ground that must be removed carefully.

Steel maxi star pickets can rust away in less than 3 years in some areas.

INSTALLATION

EnduraPost BULLpost can be driven into the toughest of ground using conventional driving methods. Attach any kind of wire, including plain, barbed, mesh or security chain-link.
