"We have used the EnduraPost Square Pickets to fence some of our wet area paddocks as the steel-star-pickets were constantly rusting! We are very happy with them and will be putting more in other areas in the future. Thanks so much for the awesome product ★★★★★"
Kistan Price – Mackay QLD

What we do

A fence that lasts a lifetime

At EnduraPost we specialise in Australian-made mineral composite recycled products and more. Our products are designed as a direct replacement for timber and steel star pickets that don't seem to last the distance anymore. Our square pickets & droppers are perfect for any kind of fencing, particularly electric fencing being completely insulated, they're rot, rust, and termite proof. Now with the addition of the NEW AA-TUFFwood strainers and the rock busting BULLpost, EnduraPost has the perfect solution for your entire fence needs.

About us

Our story

EnduraPost is an Australian business, built from the ground up with brothers Dave and Matt Oliver having grown up in the bush experiencing life in the western blocks (Western QLD, NSW, VIC & WA to be precise). Having been part of a family that has owned and share-farmed everything from wheat with sheep and cattle to dairy and more recently assisting with the running of two large stations with rangeland goats.

Farming is in their blood and is what they know, it's one of their passions in life. Having experienced firsthand, they understand that if you own land then you have fences to upkeep. That the frustration and costs associated with redoing fences is always on the rise.

Part of being a landowner means that you really care about the land and the communities you live in. When you come across amazing fit-for-purpose products that make the job better or easier or more efficient, you get excited. For example, the fertilizer bulka bag is an amazing invention because it's fit-for-purpose and makes the job so much easier and more efficient. But sadly it's single use and often ends up in the bin or left to rot in the farm dump or even worse burned.

Most people want to do the right thing and feel good about getting involved in recycling and just being part of creating a circular economy. EnduraPost now has products that divert mountains of discarded waste like bulka bags and turns them into amazing fit-for-purpose fencing products.

EnduraPost has ignited another passion in the brother's journey in life. We hope this catalogue will encourage you to join them create a more sustainable future together.

The Idea

Make sure what you buy is sustainable and fit-for-purpose.

EnduraPost Square Pickets & Droppers

Made to AS/NZS ISO 14021 standards

Our Australian made 100% recycled plastic square pickets and droppers have been in development since 2020, tested and released in January 2023. They are available with or without 14x7mm pre-drilled holes that match the hole patterns in common steel pickets. Whilst they can be sold individually, they are manufactured into packs (slings) of 200 that are strapped with pallet feet for ease of loading/unloading & stacking.

They are lightweight yet solid, flexible yet strong enough to drive into most ground conditions using common picket drivers such as manual, motorized, pneumatic and hydraulic hammer style drivers.

EnduraPost White Square Pickets

Made to AS/NZS ISO 14021 standards

Our premium range of Australian made 100% recycled white plastic square pickets have been created off the back of customer demand for a picket that is easily seen and looks great. Tested and released in late 2024, they are available with or without 14x7mm pre-drilled holes that match the hole patterns in common steel pickets. Whilst they can be sold individually, they are manufactured into packs (slings) of 200 that are strapped with pallet feet for ease of loading/unloading & stacking.

They are lightweight yet solid, flexible yet strong enough to drive into most ground conditions using common picket drivers such as manual, motorized, pneumatic and hydraulic hammer style drivers.

Our Australian made 100% recycled plastic Plus & Equine posts are the big cousin of the square picket. Made using the same materials and designed to stiffen up those longer runs. They come with or without a driving point or a round moulded top. Due to their increased size, compared to the square picket, they also come in a range of length starting at 1800mm up to 2400mm.

They can be drilled or sawn like timber and are often used in Equine training arenas. Due to the fact they will never rust or rot they are a great option for a lasting ocean post in Aquaculture too.

Poly Sheet is a heavy-duty, yet flexible sheeting that is suitable for a wide range of applications including stockyards, cattle crushes, fencing, pens, horse arenas, stables, retaining walls, lining compost bins and feed troughs. It is perfect for protecting against livestock bruising and acts as a visual barrier between stables, pens, or stockyards, making animals easier to handle.

Poly Sheet is made by Plastic Forests in Albury NSW, from over 95% recycled high-density polyethylene (HDPE) plastic. This lightweight sheeting is UV stabilised for long life—it will never rot, rust, splinter, swell, or crack. It is currently available in black, in several roll lengths, and 4 popular thicknesses (1.3mm, 2mm, 3mm, and 5mm), custom sizes and thicknesses are available upon request.

EnduraPost BULLpost

EnduraPost BULLpost is a solid galvanised steel post that is designed to outlast other steel posts. Our patented design boasting a HUGE 300+ microns of galvanising over solid steel ranging from 18 to 32mm thick, makes this post incredibly strong and durable. Perfect for driving through the toughest ground and a far superior intermediate fencing post than any other on the market today. Strapped in packs of 10 for handling and versatility, they are even suitable as inline strainers for that long run, or to strengthen high pressure zones such as laneways and cool-off pens. If steel is your go-to, then EnduraPost BULLpost is the-go for you!

AA stands for Australian Araucaria

AA-TUFFwood is home grown in Southeast Queensland from 80-year-old Australian Araucaria plantations and is incredibly tough and durable. Our timber is ethically sourced from sustainably managed & certified plantations, and the mill's close proximity to our timber source contributes to reducing the industry's carbon footprint by reducing 'log miles'.

Even though Araucaria is considered a soft wood, names can be deceiving as this is a soft wood only by name. It boasts a tight, fine uniform cell structure with minimal knots combined with 80 years of growing strength. Due to the age of the wood creating timber that is up to two meters in diameter, the strainers and posts are cut from age-hardened section that do not include the sap wood, unlike most other timber strainers on the market.

Combining the structural strength with a H5 treatment ensures that EnduraPost AA-TUFFwood will not be susceptible to termites or rot for generations. They are reliable, light yet strong, durable and sustainably made here in Australia for the long run.

EnduraPost Tree Stake

Made to AS/NZS ISO 14021 standards

The EnduraPost Tree Stake is a superior, environmentally sustainable alternative to timber or steel stakes. Made in Australia by an award-winning Australian owned company Plastic Forests, this 38x38mm square stake has an enormous number of benefits. Use them either as an individual stake or secured to a tree-guard or mesh tree barrier. Made from 100% post-consumer recycled Polypropylene plastic diverted from landfill-destined waste, these pickets are the perfect solution to creating a sustainable product. Being plastic with a UV treatment, they are super-tough and won't rust, rot, or corrode, and termites won't eat them either. They are also very difficult to set on fire, making them far superior to timber in the event of a back-burn grass fire situation. Unlike timber, they are perfect for ongoing reuse as they won't rot or harbor soil-borne pathogens – simply wash them down before reusing!

Perhaps the best part about using EnduraPost Tree Stakes, is removing the need to cut down a tree to plant another tree. The use of toxic chemicals to preserve the timber against rot and termites is also eliminated. These pickets responsibly reuse plastic which would otherwise go to landfill, whilst also supporting the planet with planting of new trees. Surely it doesn't get better than that!

Cutting down trees to plant trees...???? or,

Removing waste and planting trees!

EnduraPost Water Saver Rings

Made to AS/NZS ISO 14021 standards

EnduraPost Water Saver Rings directs water to the root ball, prevents run-off & retains mulch to improve plant survival. Concentrating fertiliser, water and mulch, reducing bird scatter, they protect plants from whipper snipper or mower damage, saving water, time and money. They can be supplied in kit form or in a Cost-effective & versatile 15m or 20m bulk roll, easily cut to size- black. They are sturdy 3mm or 5mm thick sides, with a large range of heights, diameters and volumes that can be filled directly from Council watering truck

Quick and easy assembly, without power tools, they are weatherproof, UV stabilised and virtually maintenance free. They are long lasting, will never rot, rust, or split, easy to adjust ring to size of plant and simple to move and re-use. EnduraPost Water Saver Rings are Australian made and owned, backed with a 5-year warranty, made from 100% recycled soft plastic waste and are recyclable at the end of life.

EnduraPost PATHedge

Made to AS/NZS ISO 14021 standards

EnduraPost PATHedge is ideal for a wide range of non-structural edging applications, such as edging paths, driveways, gardens, lawns, and tree surrounds. It is a long-lasting, termite-free alternative to timber edging and will never rot, crack or split. Path Edging is available in a variety of colours, sizes and rigidity levels to suit many design applications. Perfect for council use along pathways, playgrounds and recreation areas, in seaside, urban and bushland environments.

Plus, our Path Edging is made in Australia from 100% recycled plastic, so it's great for the environment. To support the agricultural community and the circular economy, our silage green Path Edging is uniquely made from farm plastics such as silage wrap, keeping this valuable resource in the productive economy.

Secured into place using our garden edge pegs, EnduraPost PATHedge is the perfect lasting solution for your path edging requirements.
